

Chandan Verma

Software Engineer | Java | Spring Boot | Microservices | Next.js | Flutter

+91 9102758286 | Chandanv016@gmail.com | linkedin.com/in/chandan-verma016 | chandanverma.vercel.app | Hyderabad, India

Summary

Software Engineer with 2 years of experience building production systems across backend, web and mobile. Backend work in **Java (8, 17, 21)** and **Spring Boot 3.x** with event-driven microservices (**Apache Kafka**, Spring Cloud) and 90%+ test coverage. Alongside this, designed, built and operated two products end to end and shipped both to production: a cross-platform social app released to the **App Store and Google Play**, and a multi-tenant **Next.js / PostgreSQL** SaaS approved through **Meta App Review**, covering schema design, third-party API integration, security hardening, VPS deployment and live operations. Microsoft Azure certified.

Experience

Capgemini

Analyst / Software Engineer

Hyderabad, India

October 2024 - Present

- Designed and integrated RESTful web services using **Java (8, 17, 21)** and **Spring Boot 3.x**, improving system interoperability by **30%** across client-facing applications.
- Architected distributed microservices with **Spring Cloud (Eureka Server)** for service discovery, reducing service resolution overhead by **25%**.
- Built responsive frontend interfaces using **HTML5, CSS3, JavaScript, and Angular**, integrated with backend REST APIs.
- Enforced code quality standards with **JUnit** and **Mockito** unit/integration tests, sustaining **90%+** code coverage across releases.
- Collaborated in Agile/Scrum ceremonies using **Git** and **Maven**, compressing sprint release cycles by **15%** through CI-friendly branching and build practices.

Projects

HookSend (hooksend.in) - Instagram Automation SaaS (*Own Product*) | *Next.js, TypeScript, PostgreSQL Jul 2026 - Present*

- Designed and shipped a multi-tenant SaaS end to end (**Next.js 16 App Router, React 19, TypeScript strict, PostgreSQL, Prisma, Redis/BullMQ**) from schema design and API integration to **Dockerised** deployment on a VPS with separate staging and production environments.
- Built an **event-driven delivery pipeline** on Instagram webhooks and **BullMQ** that matches keyword comments and sends automated DMs within seconds, with signature verification, deduplication, retry and dead-letter handling guaranteeing exactly one reply per comment.
- Implemented **concurrency-safe usage metering** using atomic compare-and-set reservations inside database transactions, eliminating a race condition that allowed workspaces to exceed their monthly DM allowance.
- Built a subscription and entitlement system with **4 plan tiers** and a 15-day trial, enforcing plan limits at send time so lapsed plans and over-cap campaigns stop automatically instead of silently sending; integrated a UPI payment flow with QR generation.
- Integrated the official **Instagram Graph API** from Meta (OAuth, webhooks, private replies, message templates, carousels, insights) and led the **Meta App Review** submission through to approval.
- Hardened the platform with **AES-256-GCM** encryption of stored access tokens and a verified key-rotation path, **SSRF** guards on outbound requests, rate limiting on public endpoints, **TOTP two-factor** and OTP-protected admin access, and fail-closed auth on internal job routes.
- Wrote **169 automated tests (Vitest)** covering the worker pipeline, billing and usage logic using module-boundary mocking, on a clean TypeScript strict-mode build; built the marketing site and design system (Tailwind v4 tokens, runtime OG image generation, JSON-LD, sitemaps).

SocialZoom - Cross-Platform Social App (*Freelance*) | *Flutter, Dart, PostgreSQL, WebRTC, Python Jun 2026 - Sep 2026*

- Built and shipped a production social app to the **App Store** and **Google Play** covering feed, stories, reels, direct messaging, voice notes and 1:1 audio/video calling, as a **Flutter** modular monorepo of 22 path-linked packages (**1,294 Dart files**, BLoC state management, go_router).
- Designed an **offline-first architecture** using **PowerSync** to mirror PostgreSQL into on-device SQLite, keeping messaging and feed fully usable with no network and reconciling automatically on reconnect.
- Implemented background and lock-screen calling end to end: **WebRTC** over Supabase Realtime signalling with a self-hosted **coturn TURN** relay, **CallKit** and **PushKit** on iOS (Swift), and foreground-service plus full-screen-intent notifications on Android (Kotlin).
- Diagnosed a production call-connection failure by building an in-app **trace pipeline** that uploaded call timelines to Postgres, identified mis-addressed ICE candidates as the root cause, and shipped a fix with regression tests.
- Authored **90 PostgreSQL migrations** with per-migration verification scripts applied to a live database with zero downtime, **Row Level Security** on every table, and PL/pgSQL business logic exposed through **PostgREST** RPCs.
- Cut push-notification delivery latency by replacing per-send connections with kept-alive HTTP pools and parallel per-device dispatch in a **Python systemd worker**, achieving roughly **1.5s median** delivery to FCM and APNs.

- Ran the production infrastructure: self-hosted **Supabase** on 2 VPS, **Caddy** with TLS and access-log secret redaction, **Cloudflare R2** media CDN, pg_cron retention jobs, encrypted off-site backups with scheduled restore tests, and health-check alerting.
- Set up **Codemagic CI/CD** for signed iOS and Android release builds and managed App Store Connect and Play Console submissions; wrote **369 Dart test suites** plus pytest coverage for every background worker.

Sleek Business CRM Platform | *Next.js, TypeScript, Supabase (PostgreSQL)*

Jul 2026 - Aug 2026

- Built a full B2B merchant acquisition and workforce management CRM (employee + admin portals), including a no-code dynamic lead-fields engine (**JSONB**-backed custom fields) that eliminates schema migrations per business vertical.
- Built a zero-knowledge **AES-256-GCM** encryption scheme (per-record IVs and auth tags) securing employee banking data, a real-time attendance system (shift/break tracking, IP whitelisting, auto clock-out), and a tamper-proof audit trail; live in production.

Sleek Telecom Provisioning & Partner Portal | *Next.js, TypeScript, Prisma, PostgreSQL*

Jun 2026 - Jul 2026

- Built a UK broadband provisioning platform with dedicated partner and admin portals, shipping an 8-step order funnel integrating the **PXC Partner API** for live broadband/fiber availability.
- Designed a role-based partner attribution system (auto-tagged agent IDs), an asynchronous dual-email engine for HQ/partner notifications, and an admin dashboard for real-time order lifecycle tracking and partner sales metrics; shipped to production.

Fleet Operations Command Platform | *Java, Spring Boot, Kafka, MySQL, Hibernate*

May 2025 - Aug 2025

- Architected a multi-service fleet management platform (Fleet, Device, Maintenance, Analytics services) supporting **5,000+** active units, with event-driven messaging via **Apache Kafka** streaming real-time notifications under **200ms**.
- Applied the **Transactional Outbox Pattern** with consumer deduplication and **Optimistic/Pessimistic Locking** (FOR UPDATE SKIP LOCKED), achieving **99.9%** message consistency and eliminating race conditions.
- Engineered telemetry data pipelines with **Hibernate batch processing**, increasing write throughput by **3.5x**.
- Hardened service-to-service calls with **Resilience4j** (Circuit Breaker, Retry, Rate Limiter) to contain cascading failures across microservices.

Technical Skills

Languages: Java (8, 17, 21), TypeScript, JavaScript, Dart, Python, SQL, PL/pgSQL, Swift, Kotlin, HTML5, CSS3

Backend: Spring Boot 3.x, Spring Core, Spring REST, Spring Data JPA, Spring Cloud (Eureka, Feign), Resilience4j, Hibernate, Node.js, FastAPI

Frontend & Mobile: Next.js (App Router), React, Angular, Flutter, BLoC, go_router, TailwindCSS

APIs & Messaging: REST, GraphQL, WebSockets, Webhooks, OAuth 2.0, Apache Kafka, Redis, BullMQ, WebRTC

Databases: PostgreSQL, MySQL, SQLite, Redis, Supabase (Realtime, RLS, PostgREST), Prisma ORM, Row Level Security

DevOps & Cloud: Docker, Docker Compose, Caddy, Nginx, Ubuntu VPS, systemd, Cloudflare R2, Codemagic CI/CD, Microsoft Azure, Git, Maven

Testing: JUnit, Mockito, Vitest, pytest, Dart test, Postman, Swagger

Other: Event-driven architecture, microservices, offline-first sync, multi-tenant SaaS, idempotency, rate limiting, AES-256-GCM encryption, App Store Connect, Google Play Console

Education

GL Bajaj Institute of Technology and Management

Master of Computer Applications (MCA)

George College

Bachelor of Computer Applications (BCA), 8.3 DGPA

Noida, India

2021 - 2023

Kolkata, India

2018 - 2021

Certifications

Microsoft Certified: Azure Developer Associate (AZ-204), Apr 2026 | Microsoft Certified: Azure Fundamentals (AZ-900), Sep 2025 | Microsoft Certified: Azure AI Fundamentals (AI-900), Jun 2025 | Oracle Certified Associate, Java SE 8 Programmer, Apr 2023 | Accelerate Development with Antigravity (Google), Aug 2026
